

Enfora announces Wireless Portfolio™ Club site

PLANO, TEXAS, May 20, 2003 – Enfora, Inc., a leader in wireless data solutions, today announced the Wireless Portfolio™ Club Internet site (<http://www.wp-club.com>). The site was co-developed by Wireless System Integration AB (WSI) based in Stockholm Sweden. Designed to function with virtually any PDA, the Wireless Portfolio™ provides all the necessary functionality to connect the user to a variety of wireless data networks through its unique architecture.

According to Loren Anderson, Sr. Director for GPRS Market Development, "We are enabling a community of users, application developers, resellers, and distributors. The WP Club site provides access to up-to-date information, solutions, and ideas for this innovative device that enables mobile connectivity. The site will be updated soon to include the recently announced WiFi version of the Wireless Portfolio™"

The wp-club site is organized to support the user and the developer/reseller community. In addition to Enfora software updates, independently developed applications will be posted on the site along with white papers and case studies. FAQs and press reviews are available as well as email links for support questions.

"We are pleased to be working with WSI," Anderson adds. "WSI is an excellent distribution and support partner for Enfora bringing global contacts and extensive experience with end-user wireless product development and sales. WSI and Enfora are working together to market, sell, and support Enfora's Wireless Portfolio™ product line globally."

Sleek Integrated Design Provides Wireless Access, Portability and Protection for Your PDA. The Wireless Portfolio™ is designed to allow the mobile professional optimum wireless freedom by integrating all the wireless data components necessary to provide seamless connectivity for a PDA into a personal organizer binder. In addition to containing the components necessary for data communication including a self-contained, long-life battery, the organizer provides space for business cards, credit cards, and notes, while serving as a small protective carrying case for the PDA.

Based in Plano, Texas, Enfora is a provider of wireless communications solutions for the growing number of integrators and mobile workers. Enfora's products are designed to provide access to mission-critical data, files and applications - quickly and wirelessly. For more information, view Enfora on the World Wide Web at <http://www.enfora.com>.

WSI AB, with its head office in Infracity, Upplands Väsby, Sweden, has extensive experience in most aspects of wireless communications. Their goal is to assist each client in obtaining a workable solution for their product requirements that will be consistent with marketing and manufacturing objectives. In simple terms, this means "getting the product to market at the right time at the right price". Learn more about WSI at <http://www.wsi.nu>.
